BACKGROUND

- Cardiovascular disease is the leading cause of death in the US.¹
- Recent scientific advancements have led to the development of innovative therapies to reduce the risk of cardiometabolic events.²
- However, it can take years for evidence generation in the research setting to be implemented in the care setting, resulting in negative consequences for patients, clinicians, and health systems.³

OBJECTIVE

- The **LATTICE (Leading Awareness To action Through Implementation of Cardiometabolic Efforts) Consortium** aims to improve collaboration among patients, clinicians, health systems, payers, patient advocacy, and life science companies to translate evidence-based advancements into clinical practice.

METHODS

Who?

The LATTICE Consortium is a coalition of experts with a shared goal to address cardiometabolic patient care through the implementation of evidence-based tools and methodologies

What?

Evidence-based tools and methodologies that address clinical inertia are shared for learning, ideating, and collaborating to enable scalable action across the healthcare ecosystem

How?

Creating synergistic networks for the integration of implementation science through the following:

- LATTICEConsortium.com resource repository
- Educational symposia events
- Regional sharing sessions

Why?

Implementation science has the potential to improve processes and outcomes in the cardiometabolic space

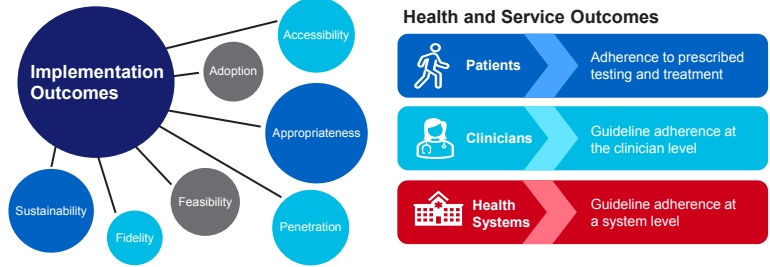

Connecting like-minded teams can facilitate efficient adaptation and adoption of evidence-based solutions across health systems

Evidence-Based Tool	Description
Prompts and reminders	Improve healthcare delivery and engagement - EHR prompts - Pre-visit LDL orders - Patient alerts
Education	Patient education - Shared decision-making tools: information aids, conversation aids, decision aids - Smartphone applications (apps) - E-learning - Telehealth HCP education - Education modules - Platform to inform LDL management performance - Newsletters
Navigators and care team model	Healthcare navigators and holistic care models provide opportunities to reduce barriers to patient care
Performance dashboard	Supports awareness of progress and areas for improvement
Motivation	Articulation of the benefit of sustained support of implementation strategies adopted into practice of healthcare system management (ie, value proposition, sustainability models, etc)

EHR, electronic health record; HCP, healthcare provider; LDL, low-density lipoprotein.

Reducing time between evidence generation in the research setting and implementation in the care setting will improve cardiovascular outcomes for patients.

OUTCOMES

Implementation Outcomes

- Sustainability
- Fidelity
- Feasibility
- Adoption
- Appropriateness
- Penetration

Health and Service Outcomes

- Patients:** Adherence to prescribed testing and treatment
- Clinicians:** Guideline adherence at the clinician level
- Health Systems:** Guideline adherence at a system level

DISCLOSURES: LKJ, LB, GCS, ED, JG, LH, and BK are employees of and own stock in Amgen Inc. ASB has received research grant support from the American College of Cardiology Foundation, Centers for Disease Control and Prevention, National Institutes of Health/National Heart, Lung, and Blood Institute, and National Institutes of Health/National Institute on Aging; and consulting fees from Amgen Inc., AstraZeneca, Heart Health Leaders, Merck, Novo Nordisk, and Sanofi Pasteur. ND works under contract with the Centers for Medicare and Medicaid Services; and reports research grants and consulting fees from Amgen Inc., AstraZeneca, Bayer, Boehringer Ingelheim, Bristol Myers Squibb, CSL Behring, Cytokinetics, Merck, Novartis, scPharmaceuticals, Verve Therapeutics, and Vifor. FAM is co-founder and holds equity in Corrie Health; serves as a consultant for Amgen Inc., Apple, Kaneka, and New Amsterdam; and has received grant support in the form of funding or material support from the American Heart Association Empowered to Serve Business Accelerator, Amgen Inc., Apple, the Louis B. Thalheimer Fund, the Maryland Innovation Initiative, the PJ Schafer Cardiovascular Research Fund, and the Wallace H. Coulter Translational Research Partnership. SSM is a co-founder and holds equity in Corrie Health; reports personal consulting fees from Amgen Inc., Arrowhead, AstraZeneca, Chroma, HeartFlow, Kaneka, Merck, NewAmsterdam Pharma, Novartis, Novo Nordisk, Premier, and Verve Therapeutics; and has received grant support in the form of funding or material support from the American Heart Association, Amgen Inc., Apple, David and June Trone Family Foundation, Google, Merck, National Institutes of Health, Patient-Centered Outcomes Research Institute, the Pollin Digital Innovation Fund, and Sandra and Larry Small. TJG, MP, EDP, NS, and KW have nothing to disclose.

FUNDING: This study was funded by Amgen Inc. Medical writing and editorial support were provided by Lisa Carson, PhD, of Red Nucleus, and funded by Amgen Inc.
